

Contents

Chapter I. Introduction	1
1.1 Population Growth Models, One Population	2
1.2 Iteration of Real Valued Functions as Dynamical Systems ..	3
1.3 Higher Dimensional Systems.....	5
1.4 Outline of the Topics of the Chapters	9
Chapter II. One-Dimensional Dynamics by Iteration	13
2.1 Calculus Prerequisites	13
*2.2 Periodic Points	15
*2.2.1 Fixed Points for the Quadratic Family	20
*2.3 Limit Sets and Recurrence for Maps	22
*2.4 Invariant Cantor Sets for the Quadratic Family	26
*2.4.1 Middle Cantor Sets	26
*2.4.2 Construction of the Invariant Cantor Set	30
2.4.3 The Invariant Cantor Set for $\mu > 4$	33
*2.5 Symbolic Dynamics for the Quadratic Map	38
*2.6 Conjugacy and Structural Stability	41
*2.7 Conjugacy and Structural Stability of the Quadratic Map ..	47
2.8 Homeomorphisms of the Circle.....	50
2.9 Exercises	58
Chapter III. Chaos and Its Measurement	65
3.1 Sharkovskii's Theorem	65
3.1.1 Examples for Sharkovskii's Theorem	72
3.2 Subshifts of Finite Type	74
3.3 Zeta Function	80
3.4 Period Doubling Cascade	82
3.5 Chaos	84
3.6 Liapunov Exponents	88
3.7 Exercises	91
Chapter IV. Linear Systems	95
4.1 Review: Linear Maps and the Real Jordan Canonical Form.	95
*4.2 Linear Differential Equations	97
*4.3 Solutions for Constant Coefficients	99
*4.4 Phase Portraits.....	104
*4.5 Contracting Linear Differential Equations	108
*4.6 Hyperbolic Linear Differential Equations	113
*4.7 Topologically Conjugate Linear Differential Equations	115
*4.8 Nonhomogeneous Equations	117
*4.9 Linear Maps	118
4.9.1 Perron-Frobenius Theorem	125
4.10 Exercises	129

* Core Sections

CONTENTS

Chapter V. Analysis Near Fixed Points and Periodic Orbits	133
*5.1 Review: Differentiation in Higher Dimensions	133
*5.2 Review: The Implicit Function Theorem	136
*5.2.1 Higher Dimensional Implicit Function Theorem ..	138
*5.2.2 The Inverse Function Theorem.....	139
*5.2.3 Contraction Mapping Theorem.....	140
*5.3 Existence of Solutions for Differential Equations.....	142
*5.4 Limit Sets and Recurrence for Flows.....	148
*5.5 Fixed Points for Nonlinear Differential Equations	151
*5.5.1 Nonlinear Sinks.....	153
*5.5.2 Nonlinear Hyperbolic Fixed Points.....	155
*5.5.3 Liapunov Functions Near a Fixed Point	156
*5.6 Stability of Periodic Points for Nonlinear Maps	158
5.7 Proof of the Hartman-Grobman Theorem	160
*5.7.1 Proof of the Local Theorem.....	166
5.7.2 Proof of the Hartman-Grobman Theorem for Flows	167
*5.8 Periodic Orbits for Flows	168
5.8.1 The Suspension of a Map	173
5.8.2 An Attracting Periodic Orbit for the Van der Pol Equations	174
5.8.3 Poincaré Map for Differential Equations in the Plane	179
*5.9 Poincaré-Bendixson Theorem	181
*5.10 Stable Manifold Theorem for a Fixed Point of a Map.....	183
5.10.1 Proof of the Stable Manifold Theorem	187
5.10.2 Center Manifold	200
*5.10.3 Stable Manifold Theorem for Flows	202
*5.11 The Inclination Lemma.....	203
5.12 Exercises	204
Chapter VI. Hamiltonian Systems.....	215
6.1 Hamiltonian Differential Equations	215
6.2 Linear Hamiltonian Systems	220
6.3 Symplectic Diffeomorphisms	223
6.4 Normal Form at Fixed Point	227
6.5 KAM Theorem	231
6.6 Exercises	233
Chapter VII. Bifurcation of Periodic Points.....	237
7.1 Saddle-Node Bifurcation	237
7.2 Saddle-Node Bifurcation in Higher Dimensions	239
7.3 Period Doubling Bifurcation	244
7.4 Andronov-Hopf Bifurcation for Differential Equations	249
7.5 Andronov-Hopf Bifurcation for Diffeomorphisms	256
7.6 Exercises	259
Chapter VIII. Examples of Hyperbolic Sets and Attractors	263
*8.1 Definition of a Manifold	263
*8.1.1 Topology on Space of Differentiable Functions	265
*8.1.2 Tangent Space.....	266
*8.1.3 Hyperbolic Invariant Sets	269

* Core Sections

CONTENTS

*8.2 Transitivity Theorems	273
*8.3 Two-Sided Shift Spaces.....	275
8.3.1 Subshifts for Nonnegative Matrices.....	275
*8.4 Geometric Horseshoe	277
8.4.1 Horseshoe for the Hénon Map.....	283
*8.4.2 Horseshoe from a Homoclinic Point	287
8.4.3 Nontransverse Homoclinic Point.....	297
*8.4.4 Homoclinic Points and Horseshoes for Flows.....	299
8.4.5 Melnikov Method for Homoclinic Points.....	302
8.4.6 Fractal Basin Boundaries	307
*8.5 Hyperbolic Toral Automorphisms.....	308
8.5.1 Markov Partitions for Hyperbolic Toral Automorphisms.....	313
8.5.2 Ergodicity of Hyperbolic Toral Automorphisms...	320
8.5.3 The Zeta Function for Hyperbolic Toral Automor- phisms	322
*8.6 Attractors.....	326
*8.7 The Solenoid Attractor	328
8.7.1 Conjugacy of the Solenoid to an Inverse Limit....	333
8.8 The DA Attractor	334
8.8.1 The Branched Manifold.....	338
*8.9 Plykin Attractors in the Plane.....	338
8.10 Attractor for the Hénon Map	341
8.11 Lorenz Attractor	344
8.11.1 Geometric Model for the Lorenz Equations	347
8.11.2 Homoclinic Bifurcation to a Lorenz Attractor	353
*8.12 Morse-Smale Systems.....	353
8.13 Exercises	361
Chapter IX. Measurement of Chaos in Higher Dimensions	369
9.1 Topological Entropy	369
9.1.1 Proof of Two Theorems on Topological Entropy ..	379
9.1.2 Entropy of Higher Dimensional Examples	386
9.2 Liapunov Exponents	387
9.4 Sinai-Ruelle-Bowen Measure for an Attractor	392
9.4 Fractal Dimension	393
9.5 Exercises	398
Chapter X. Global Theory of Hyperbolic Systems.....	403
10.1 Fundamental Theorem of Dynamical Systems	403
10.1.1 Fundamental Theorem for a Homeomorphism ..	410
10.2 Stable Manifold Theorem for a Hyperbolic Invariant Set....	411
10.3 Shadowing and Expansiveness	414
10.4 Anosov Closing Lemma.....	418
10.5 Decomposition of Hyperbolic Recurrent Points	419
10.6 Markov Partitions for a Hyperbolic Invariant Set.....	425
10.7 Local Stability and Stability of Anosov Diffeomorphisms ...	435
10.8 Stability of Anosov Flows.....	438
10.9 Global Stability Theorems	441
10.10 Exercises	444

* Core Sections

CONTENTS

Chapter XI. Generic Properties	449
11.1 Kupka-Smale Theorem	449
11.2 Transversality	453
11.3 Proof of the Kupka–Smale Theorem.....	455
11.4 Necessary Conditions for Structural Stability.....	461
11.5 Nondensity of Structural Stability	464
11.6 Exercises	466
Chapter XII. Smoothness of Stable Manifolds and Applications	469
12.1 Differentiable Invariant Sections for Fiber Contractions.....	469
12.2 Differentiability of Invariant Splitting	477
12.4 Differentiability of the Center Manifold	480
12.4 Persistence of Normally Contracting Manifolds.....	480
12.5 Exercises	484
References	487
Index	501
