

## CONTENTS

<b>Chapter I. Linear Algebra, Basic Notions</b>	<b>1</b>
1.1 Introduction	1
1.2 Matrix Algebra	4
1.3 Formal Rules	12
1.4 Linear Systems of Algebraic Equations	15
1.5 Singularity, Pivots, and Invertible Matrices	24
1.6 Gauss-Jordan Reduction in the General Case	36
1.7 Homogeneous Systems and Vector Subspaces	46
1.8 Linear Independence, Bases, and Dimension	51
1.9 Calculations in $\mathbf{R}^n$	62
1.10 Review Problems	67
<b>Chapter II. Determinants and Eigenvalues</b>	<b>71</b>
2.1 Introduction	71
2.2 Definition of the Determinant	74
2.3 Some Important Properties of Determinants	82
2.4 Eigenvalues and Eigenvectors	89
2.5 Diagonalization	100
2.6 The Exponential of a Matrix	105
2.7 Review	108
<b>Chapter III. Applications</b>	<b>111</b>
3.1 Real Symmetric Matrices	111
3.2 Repeated Eigenvalues, The Gram-Schmidt Process	113
3.3 Change of Coordinates	118
3.4 Classification of Conics and Quadrics	125
3.5 Conics and the Method of Lagrange Multipliers	133
3.6 Normal Modes	139
3.7 Review	147
<b>Chapter IV. Index</b>	<b>149</b>
