

Base-ic Training

The most common number systems used in the world today are the base 10 system (which uses the digits 0 through 9), and the binary system (which only uses the digits 0 and 1). Where do these systems come from? Why are they useful? Are there other systems we can create? We will explore these and other questions at the Evanston Math Circle!

Come join us virtually at the:

EVANSTON MATH CIRCLE **Saturday, May 1, 11-12:30**

The session will be held live via Zoom. A link to the meeting will be sent out to those on our email list the morning of the event.

Math Circle is geared towards eager middle-school students, but students of other ages and backgrounds are welcome as well. More information is available at <http://www.math.northwestern.edu/~scanez/mathcircle/>
