

Big Numbers

How many hairs do you have on your head? How many pet dogs are there in the United States? How many words do you say in a year? There are many mathematical questions that don't have an exact answer (or it is very difficult to find). In these situations, the best we can do is estimate the answer using common sense and educated guesswork. Questions like the ones above are called **Fermi Problems**, and we will be studying them and others at this month's...Math Circle!

Come join us virtually at the:

EVANSTON MATH CIRCLE
Saturday, September 25, 11-12:30

The session will be held live via Zoom. A link to the meeting will be sent out to those on our email list the morning of the event.

Math Circle is geared towards eager middle-school students, but students of other ages and backgrounds are welcome as well. More information is available at <http://www.math.northwestern.edu/~scanez/mathcircle/>
